

Why Should I Get A Home Energy Audit?

Because it is the first step to saving you money!

Here are a few more reasons:

- > It will reduce your impact on the environment
- > There are incentives available to reduce the cost

About Our Company

The majority of our clients will save an average of 30% on their energy bills after receiving our energy audit and following the upgrade recommendations we provide. These savings equal an average of \$800-\$1000 per year—so the sooner you call the sooner you save!

Save up to 30% On Your Utility Bills

Our Energy Audit Includes:
Utility Bill Analysis

Insulation Inspection

Lighting Upgrade Calculation

HVAC System Analysis

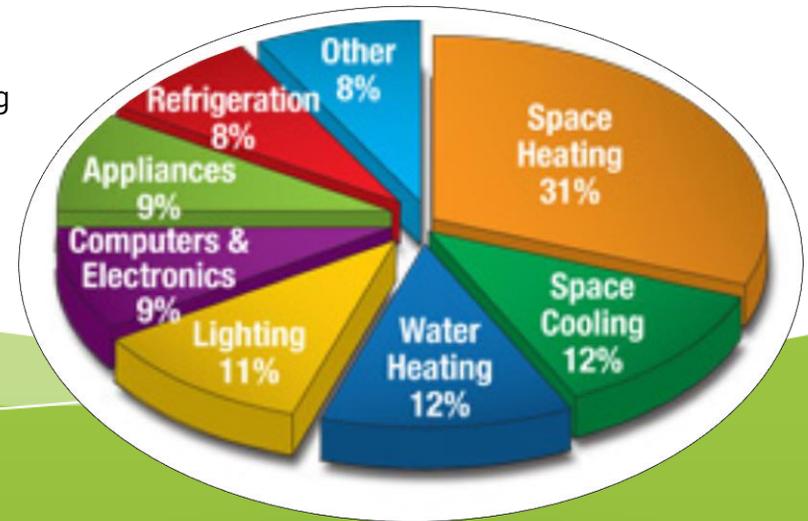

Water Conservation

Home Appliance Usage

Take Advantage of our low-cost whole house audit for just \$200!

The average home energy usage is about \$2,600 per year. Continuous heating and air conditioning consumption account for half of your energy costs. The average family's carbon footprint is over 11,200 pounds of pollutants, which go directly into the atmosphere each year. Here is a closer look at where the average residence is using energy every month

What to Expect With Your Energy Audit

Your Home Energy Audit will consist of the following four steps:

1. Perform historic energy use analysis prior to the site and determine base vs. seasonal use.
2. Perform a full house inspection of all energy consuming items including HVAC, appliances, lighting, water, electronics, and lots more.
3. Identify potential modifications that will reduce your energy use and/or operating cost.
4. Prepare a report that documents the analysis, results, tax rebates and incentives

In order to provide you the maximum in energy savings, the energy auditor will need to obtain the energy bills for a minimum of 1 year.
